

Principles of our Science Curriculum

- Pupils build upon previous knowledge and learn new things through engaging and stimulating science lessons.
- Pupils ask questions and discuss concepts to develop their ideas and understandings.
- Pupils have practical and active lessons in a range of scientific activities.
- Pupils have the opportunities to be independent in their learning.
- Pupils have the opportunities to foster their curiosity through a range of enquiries.
- Pupils can engage with the wider school opportunities and to share their learning with others.

It is our intention at Chieveley that our children develop a lifelong curiosity and interest in the sciences. Our science curriculum provides the children with the opportunities, wherever possible, to learn through varied systematic investigations, leading to them being equipped for life to ask and answer scientific questions about the world around them. As children progress through the year groups, they build on their skills in working scientifically, as well as on their scientific knowledge, as they develop greater independence in planning and carrying out fair and comparative tests to answer a range of scientific questions. We ensure that children have a varied, progressive and well-mapped-out science curriculum that provides the opportunity for progression across the full breadth of the science national curriculum for KS1 and KS2.

The medium term planning and progression map of Science lessons below will reflect exactly what content, knowledge and skills are critical for pupils to progress through the curriculum in each year. This clearly mapped progression document shows how these topics progress across the years, including EYFS. Working scientifically processes and methods should be embedded in lessons so that children learn to use a variety of skills to answer scientific questions and explore investigations. These are: observing over time, pattern seeking, identifying and classifying, comparative and fair testing and researching secondary resources. We encourage scientific writing to be meaningful and demonstrate high quality writing across the curriculum. Where possible, scientific equipment is used for children to explore and investigate. Children get a first-hand learning experience by performing various experiments.

Children learn in a variety of ways, and so where appropriate, children will learn science outside the classroom. We also plan visits to museums and local places of scientific relevance such as Winchester Science Museum. Children can clearly see things in context which promotes and fosters an emotional connection between children and the natural environment. The outdoors also facilitates creative activities such as drawing and sketching, basic skills in science that we should encourage. We run a yearly science fayre and science weeks or individual days. Children's work is recorded in books or in class floor books, where their discussions and photos can be recorded, where relevant.

Science is celebrated at our school. Within the classroom, children will celebrate their work, and that of their peers, including findings from practical investigations, through sharing opportunities. Science learning will be evident throughout the school and children will be encouraged to take part in Science days/weeks. When the opportunity arises, we aim to share the children's scientific achievements in our monthly

newsletters. At Chieveley, we always evaluate progress through unit assessments which can take the form of investigations, targeted questioning, reasoning tasks and recorded in our foundation assessment tracker. This takes into account their own self-assessments as well as teacher assessment. The impact of our Science curriculum is measured in a variety of ways by class teachers, subject and senior leaders. The subject leader works with staff to make evidence-based judgements following learning walks, interviews with pupils and staff, document reviews and book looks including images/videos of children's practical learning which are used to inform next steps as well as celebrate and share good practice, contributing to the ongoing improvement of the subject across the schools.

Science in EYFS

Communication and Language	The Natural World	Understanding the world	Personal, social and emotional development
<p>Learn new vocabulary</p> <p>Ask questions to find out more and to check what has been said</p> <p>Describe events in detail</p> <p>Use talk to help work out problems and organise thinking and activities, and to explain how things work and why they might happen,</p>	<p>Explore the natural world around them, making observations and drawing pictures of animals and plants.</p> <p>Know similarities and differences between the natural world around them and contrasting environments, drawing on their experiences and what has been read in class.</p> <p>Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter.</p>	<p>Explore the natural world around them</p> <p>Describe what they see, hear and feel while they are outside</p> <p>Recognise some environments that are different to the one in which they live</p> <p>Understand the effect of changing seasons on the natural world around them</p>	<p>Know and talk about different factors that support their overall health and wellbeing:</p> <ul style="list-style-type: none"> - regular physical activity - Healthy eating - Toothbrushing - Sensible amounts of 'screen time' - A good sleep routine - Being a safe pedestrian

SCIENCE PROGRAMME
OF STUDY
PROGRESSION MAP

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Animals Including Humans	<p>Pupils should be taught to:</p> <p>identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals;</p> <p>identify and name a variety of common animals that are carnivores, herbivores and omnivores;</p> <p>describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals including pets);</p> <p>identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.</p>	<p>Pupils should be taught to:</p> <p>notice that animals, including humans, have offspring which grow into adults;</p> <p>find out about and describe the basic needs of animals, including humans, for survival (water, food and air);</p> <p>describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene.</p>	<p>Pupils should be taught to:</p> <p>identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat;</p> <p>identify that humans and some other animals have skeletons and muscles for support, protection and movement.</p>	<p>Pupils should be taught to:</p> <p>describe the simple functions of the basic parts of the digestive system in humans;</p> <p>identify the different types of teeth in humans and their simple functions;</p> <p>construct and interpret a variety of food chains, identifying producers, predators and prey.</p>	<p>Pupils should be taught to:</p> <p>describe the changes as humans develop to old age.</p>	<p>Pupils should be taught to:</p> <p>identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood;</p> <p>recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function;</p> <p>describe the ways in which nutrients and water are transported within animals, including humans.</p>

<p style="text-align: center;">Plants</p>	<p>Pupils should be taught to:</p> <p>identify and name a variety of common wild and garden plants, including deciduous and evergreen trees;</p> <p>identify and describe the basic structure of a variety of common flowering plants, including trees.</p>	<p>Pupils should be taught to:</p> <p>observe and describe how seeds and bulbs grow into mature plants;</p> <p>find out and describe how plants need water, light and a suitable temperature to grow and stay healthy.</p>	<p>Pupils should be taught to:</p> <p>identify and describe the</p> <p>functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers;</p> <p>explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant;</p> <p>investigate the way in which water is transported within plants;</p> <p>explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal.</p>			
---	--	---	---	--	--	--

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Living Things and Their Habitats		<p>Pupils should be taught to:</p> <p>explore and compare the differences between things that are living, dead, and things that have never been alive;</p> <p>identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other.</p> <p>identify and name a variety of plants and animals in their habitats, including microhabitats;</p> <p>describe how animals obtain their food from plants and other</p>		<p>Pupils should be taught to:</p> <p>recognise that living things can be grouped in a variety of ways;</p> <p>explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment;</p> <p>recognise that environments can change and that this can sometimes pose dangers to living things.</p>	<p>Pupils should be taught to:</p> <p>describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird;</p> <p>describe the life process of reproduction in some plants and animals.</p>	<p>Pupils should be taught to:</p> <p>describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals;</p> <p>give reasons for classifying plants and animals based on specific characteristics.</p>

		<p>animals, using the idea of a simple food chain, and identify and name different sources of food.</p>				
<p>Evolution and Inheritance</p>						<p>Pupils should be taught to:</p> <p>recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth Millions of years ago;</p> <p>recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents;</p> <p>identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.</p>

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Seasonal Changes	<p>Pupils should be taught to:</p> <ul style="list-style-type: none">observe changes across the 4 seasons;observe and describe weather associated with the seasons and how day length varies.					

<p>Forces</p>			<p>Forces and Magnets Pupils should be taught to:</p> <p>compare how things move on different surfaces;</p> <p>notice that some forces need contact between 2 objects, but magnetic forces can act at a distance;</p> <p>observe how magnets attract or repel each other and attract some materials and not others;</p> <p>compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials;</p> <p>describe magnets as having 2 poles;</p> <p>predict whether 2 magnets will attract or repel each other, depending on</p>		<p>Forces Pupils should be taught to:</p> <p>explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object;</p> <p>identify the effects of air resistance, water resistance and friction, that act between moving surfaces;</p> <p>recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect.</p>	
---------------	--	--	--	--	---	--

			which poles are facing.			
--	--	--	-------------------------	--	--	--

Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
--------	--------	--------	--------	--------	--------

Light

Pupils should be taught to:

- recognise that they need light in order to see things and that dark is the absence of light;
- notice that light is reflected from surfaces;
- recognise that light from the sun can be dangerous and that there are ways to protect their eyes;
- recognise that shadows are formed when the light from a light source is blocked by an opaque object;
- find patterns in the way that the size of shadows change.

Pupils should be taught to:

- recognise that light appears to travel in straight lines;
- use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye;
- explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes;
- use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.

Sound

Pupils should be taught to:

- identify how sounds are made, associating some of them with something vibrating;
- recognise that vibrations from sounds travel through a medium to the ear;
- find patterns between the pitch of a sound and features of the object that produced it;
- find patterns between the volume of a sound and the strength of the vibrations that produced it;
- recognise that sounds get fainter as the distance from the sound source increases.

Earth and Space	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
					<p>Pupils should be taught to:</p> <ul style="list-style-type: none"> describe the movement of the Earth and other planets relative to the sun in the solar system; describe the movement of the moon relative to the Earth; describe the sun, Earth and moon as approximately spherical bodies; use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky. 	

<p>Electricity</p>				<p>Pupils should be taught to:</p> <p>identify common appliances that run on electricity;</p> <p>construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers;</p> <p>identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery;</p> <p>recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit;</p> <p>recognise some common conductors and insulators, and associate metals with being good conductors.</p>		<p>Pupils should be taught to:</p> <p>associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit;</p> <p>compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches;</p> <p>use recognised symbols when representing a simple circuit in a diagram.</p>
--------------------	--	--	--	---	--	---

<p>Materials</p>	<p>Everyday Materials</p> <p>Pupils should be taught to:</p> <ul style="list-style-type: none"> distinguish between an object and the material from which it is made; identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock; describe the simple physical properties of a variety of everyday materials; compare and group together a variety of everyday materials on the basis of their simple physical properties. 	<p>Use of Everyday Materials</p> <p>Pupils should be taught to:</p> <ul style="list-style-type: none"> identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses; find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching. 	<p>Rocks</p> <p>Pupils should be taught to:</p> <ul style="list-style-type: none"> compare and group together different kinds of rocks on the basis of their appearance and simple physical properties; describe in simple terms how fossils are formed when things that have lived are trapped within rock; recognise that soils are made from rocks and organic matter. 	<p>States of Matter</p> <p>Pupils should be taught to:</p> <ul style="list-style-type: none"> compare and group materials together, according to whether they are solids, liquids or gases; observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius ($^{\circ}\text{C}$); identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature. 	<p>Properties and Changes of Materials</p> <p>Pupils should be taught to:</p> <ul style="list-style-type: none"> compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets; know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution; use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating; give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic; demonstrate that dissolving, mixing and changes of state are reversible changes; explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda. 	
------------------	---	---	--	---	--	--

WORKING SCIENTIFICALLY PROGRESSION MAP

Year 1 and 2 - working scientifically

During years 1 and 2, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- asking simple questions and recognising that they can be answered in different ways;
- observing closely, using simple equipment;
- performing simple tests;
- identifying and classifying;
- using their observations and ideas to suggest answers to questions; gathering and recording data to help in answering questions.

Year 3 and 4 - Working Scientifically

During years 3 and 4, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- asking relevant questions and using different types of scientific enquiries to answer them;
- setting up simple practical enquiries, comparative and fair tests;
- making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers;
- gathering, recording, classifying and presenting data in a variety of ways to help in answering questions;
- recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables;
- reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions;
- using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions;
- identifying differences, similarities or changes related to simple scientific ideas and processes;

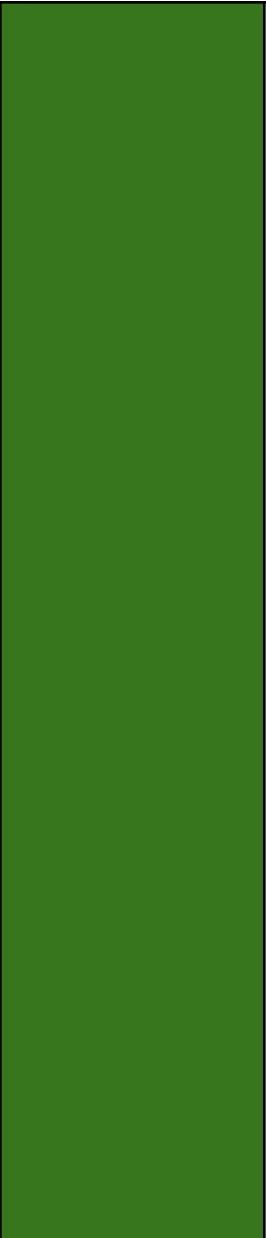

- using straightforward scientific evidence to answer questions or to support their findings.

Year 5 and 6 - Working Scientifically

During years 5 and 6, pupils should be taught to use the following practical scientific methods, processes and skills through the teaching of the programme of study content:

- planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary;
- taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate;
- recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs;
- using test results to make predictions to set up further comparative and fair tests;
- reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as displays and other presentations;
- identifying scientific evidence that has been used to support or refute ideas or arguments.
